## Product Bulletin

### Chloride (Oneac) Power and UPS Products

MB-HW-1186 Issue 9  
June 17, 2011

This Issue 9 updates the Chloride/Oneac pricing and offerings, effective immediately. Changes of significance are marked in red.

Clean and uninterruptible power have become requirements to most grocers – clean power to minimize failures, maintenance and downtime, while a UPS allows continued checkout during power outages and ensures that the shoppers will be able to check out while power is being restored.

StoreNext now offers a complete lineup of the industry's best power filters, conditioners and UPS units at low *Dealer Net prices* for all a Dealer's your PoS needs, including hospitality and specialty as well as ScanMaster and ISS45 PoS. StoreNext's prices are well below offerings from other vendors and dealer groups.

The new Oneac ONEplus units are truly the state-of-the-art. As small as a shoebox, these one-piece units bring the latest in power-conditioning technology with full isolation, ONEground ground-loop protection and battery-backup to boot (or *not* have to boot, in this case). Oneac has a long and distinguished history as the leading supplier of power cleaning and maintenance products. Some imitators in the market do a pretty good job too – but those others provide nowhere near the quality or protection of Oneac or the leading providers.

Oneac is committed to the success of this program, and Oneac's regional and local staff is now fully available to Dealers to work with your questions, technical issues and opportunities. Each one is an expert at power and cost/benefit issues in the PoS area. In addition, **Gene Sloan** can be reached at **817-282-8664** if you need additional support or have not yet been contacted by your local or regional Oneac representative.

#### FREE UNIT NOW ON ALL ITEMS AND ANY QUANTITY

Dealers now get "buy ten, get one free" on all StoreNext Oneac products listed. But you don't have to buy 10 at a time: you can order 1, 2 or a dozen, but still get the StoreNext/Oneac special pricing for StoreNext dealers. Your purchases are tracked and the free units are shipped along with the order that earns the bonus.

These products all decrease TCO and maintenance costs – and we hope that these low prices will increase your profits in the power products area. Please see the Oneac Brochures and information on the StoreNext Dealer Support Web site at on the [Brochures Page](#).

To Your Success,

Anthony van Seventer

## ONEAC ONEPLUS POWER-CONDITIONED UPS

The ONePlus will be your new lead weapon in the power wars – ensuring both clean current for the POS and a profitable business. The ONePlus brings the following key advantages:

- ***Quiet, small-footprint single-box solution*** – power conditioning and UPS in one unit
- ***Several sizes to choose from*** – offering battery life and current draw options: 250, 400, 600 and 1,000VA units are available
- ***Front-access, user-replaceable battery*** – no downtime, no tools, no risk – thermally isolated
- ***Fully-isolated low-impedance transformer*** – provides the highest level of protection against transients
- ***ONeGround®*** – prevents damage to I/O boards, minimizes disruption and degradation caused by ground voltage differentials
- ***Comprehensive front-panel display*** – plus audible alarms to provide fault warnings (with silencing feature)
- ***Buck and boost voltage regulation*** – handles most power overages and brown-out dips within the circuitry without having to go to battery – conserves battery performance
- ***5-Year warranty*** – assurance of best quality and performance in the business<sup>1</sup>
- ***Low dealer cost*** – less than nearest comparable product

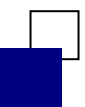

And — taking a deep breath — Oneac ONePlus units also offer:

- ***USB and RS232 communications ports*** – adds flexibility for status and reporting
- ***Line-interactive, power conditioned topology*** – to further eliminate power contaminants
- ***Includes MopUPS Express® UPS software*** – for automated system shutdown
- ***True sine wave output*** – ensures clean power
- ***Cold starts*** – so systems can be fully tested before electrical wiring is complete. This makes installation a *lot* easier.
- ***Safety approvals: UL, cUL***
- ***Manufactured under ISO 9001*** – assures consistent quality and performance.
- ***Free 24-hour technical support***

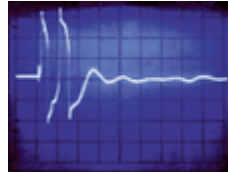

See the general discussion of power-conditioned UPS units starting on Page 4 below, plus all the new pricing on these outstanding products.

---

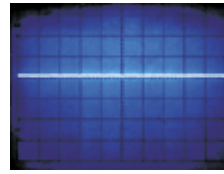

<sup>1</sup> Two-year warranty on batteries in these products. All warranty fulfillment directly from Oneac.

## ONEAC CONDITION-ONE® POWER CONDITIONERS

Typical surge  
suppressor/RF  
filter-based  
technology output

ONEAC power  
conditioned output

**General:** Power Conditioners carry power cleansing to the next level, not only filtering out problems, but ensuring the clean wave needed by computer equipment. Not only is the amplitude controlled, but the “edge speed” (frequency) of electrical transients. Even the typical safety ground – which introduces noise – is replaced by a noise-free signal ground, further protecting the electronics. For some good information to use when selling Power Conditioning versus simple surge suppressors, [click here for the Tech Tips document](#).

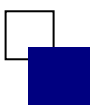

Features of Oneac ConditionOne Power Conditioners include:

- **Reliable low impedance transformer design** – provides constant and consistent protection against voltage spikes
- **Tight surge let-through** – highest possible assurance that conducted transient voltages won't damage or degrade hardware components
- **Virtual Kelvin Ground** – maximizes system reliability by preventing “soft errors” and other symptoms of logic disruption caused by high-frequency noise
- **Optional ONEGROUND™ technology** – prevents damage to I/O boards, minimizes disruption and degradation caused by ground voltage differentials
- **Front panel indicator lights** – shows output power and wiring fault conditions
- **Maintenance-free** – no parts that wear out – so total lifetime cost is limited to the original purchase price
- **Small footprint and wall-mount** – fits into any environment
- **5-year warranty** – the best in the industry
- **Brochure** – Click for the Oneac [power conditioning brochure](#)

**What to Use:** use the 75VA model for single units or peripheral devices such as remote printers. Use the 180VA model for a current TeamPoS or SurePOS terminals and peripherals in the lane. The 240VA model is available older terminal designs that need additional output.

Use the models with the **ONEground option** for remote RS-232 and other areas where the interface signal and I/O needs to be protected. These are especially useful in hospitality applications, kitchen printers, etc. where the peripheral device is powered from a different circuit than the host machine, but there is a grounded cable (e.g. RS-232) joining the two. ONEground fixes such grounded communications with patented circuitry around the ground pole that eliminates the ground loops and surges that could come down the signal line and corrupt the data. For more (a lot more) on Ground Loops and why ONEground works so well, see the [ONEground technical bulletin](#).

## ONEAC UNINTERRUPTIBLE POWER SUPPLIES (UPS)

**General:** Desk Power offers the smallest footprint and most complete array of features for a UPS in its class. It is equipped with two battery and surge protected outputs for critical components requiring extended runtime in case of power outage, and two surge-only outputs for less critical components. Desk Power also features a data line protector port to filter out electrical interference that can pollute data transmissions. Desk Power supports USB communications and includes MopUPS® Express Communications Software for UPS and battery monitoring and management over USB.

### Features:

- *Standby technology*
- *Smallest footprint and weight in its class*
- *120 V models feature hot-swap battery replacement*
- *Two battery back-up and surge protected outputs*
- *Two surge-only protected outputs*
- *Internet ready* – featuring a data port to protect fax/modem/LAN transmissions
- *USB or RS-232 communications ports*
- *Includes MopUPS® Express Communications Software and cable*
- *A cost-effective way to add battery back-up to an existing power conditioned system*
- *Global approvals* – UL and CE listed
- *2-Year Warranty<sup>1</sup>*
- *Click here for the [Desk Power Brochure](#):*

**What to Use:** The Desk Power 300 will operate current SurePOS or TeamPoS terminals and their peripherals (or a typical PC for about 8-10 minutes without AC power, often enough to get the existing customers checked out and perform an orderly shut down. The Desk Power 650 runs the TeamPoS 2000 and peripherals for 40-47 minutes, and current TeamPoS or SurePOS terminals will likely run a little longer depending upon configuration. Note that only a basic surge suppressor is included in these UPS units – connect these to a power filter or power conditioner unit to complete the power unit.

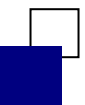

## UPS WITH INTERNAL POWER CONDITIONING

**When to Use:** See the ONePlus information on Page 2 for features of this product line.

As a benchmark, the ONePlus 250 VA model will drive a TeamPoS 2000 terminal including printer, scanner/scale and display about 15 minutes, with the 400 VA unit going to 25 minutes, the 600VA at 50 minutes and 80 minutes with the 1000VA model. Current TeamPoS 3000 or SurePOS 300, 500 and 700 units will likely run a little longer depending on configuration. <sup>2</sup>

---

<sup>2</sup> Note: Runtimes are based upon fully charged, new batteries. Runtimes are affected by battery age, ambient temperature, site-specific UPS usage patterns, and operating load characteristics. Actual runtimes may vary.
