384654 – Manual Discount Function Change (FO/POS)	5
Technical Reference Appendix	6
Out of Scope	6

Introduction

Enhancements were recently made to the Retalix ISS45 system. The changes are reflected in the accompanying ISS45 8.1.7.0-080 software. The Change Request Document (CRD) number assigned to the enhancement is listed in the description heading. Following the change description is an abbreviation of the ISS45 area affected:

(FO) – Front Office

(POS) – WinPOS

The enhancements are explained in the following pages and are not included in the latest Office Users Guide, WinPOS User Guide or Office Administrator's Reference. If you have any questions regarding this release, please contact Retalix Support.

368240 – Databar Family Code Validation (FO/POS)

The Databar coupon engine has been modified in this release to validate the Family Code for Databar coupons. In previous releases, coupon validation was only performed on the 5-digit company prefix (when enabled).

Note:

The Family Code is assigned by the owner of the primary GS1 company prefix and used for validation of the qualifying purchase items.

Front Office

Modified Parameter

The following existing General System Parameter (located in the existing Store \ POST \ Monetary \ Coupons \ Databar folder) has been modified to support two new Family Code validations.

Parameter	Explanation
Level of Databar coupon validation	This parameter defines the necessary validation level when an item is purchased with a Databar coupon. Valid types include: Validating the 5-digit company prefix, Family (3 digit) or Family Code Wildcards .

POS

The POS now executes the following logic when validating a Databar coupon prior to acceptance.

If the “Level of Databar coupon validation” is set to “Family (3 digit)”, the coupon is only allowed if there is an exact match with the item’s Family Code.

If the “Level of Databar coupon validation” is set to “Family Code Wildcards”:

- If the Family Code in the Databar coupon has no trailing zeroes, then it will be matched exactly against the 3 digits of the Family

Code in the item PLU. If a match is identified, it will be added to the ticket. Otherwise, the coupon will be declined.

- If the Family Code in the Databar coupon has one trailing zero in the Databar coupon, it will be matched against item PLU family codes in the 120-129 range. If a match is identified, it will be added to the ticket. Otherwise, the coupon will be declined.
- If the Family Code in the Databar coupon has two trailing zeroes in the Databar coupon, it will be matched against item PLU family codes in the 100-199 range. If a match is identified, it will be added to the ticket. Otherwise, the coupon will be declined.

382505 – EBT WIC Eligible Benefits Only Parameter Removal (FO/POS)

The General System Parameter “Display Eligible Benefits Only” (located in the Store \ POST \ Operational \ Wic \ EBT WIC folder) has been removed in this release. All benefit prescription data for beginning and ending balances now print in sites using EBT WIC (a.k.a. Smart Card WIC) whether the balances are zero or not.

384654 – Manual Discount Function Change (FO/POS)

A new General System Parameter in this release controls how the Retalix Loyalty Manual Discount Keyboard Function (1412) issues discounts on items sold using the Quantity Key. The Keyboard Function sends the previous line item in the ticket to the Loyalty Promotion Engine for a loyalty discount. If the new General System Parameter is enabled and the function is used on a line item sold using the Quantity key, each of the items will receive a loyalty discount. For example, if the function is used on a line item sale “3 Qty”, PLU “123” (\$2.00 price), and a discount of 10% is used, a \$0.60 discount will be applied. If the new parameter is set to “No”, \$0.20 would be discounted (applying the discount to the last of the 3 items).

New Parameter

As part of this feature a new parameter has been established. The following General System Parameter is located in the Store \ Technical \ Retalix Loyalty folder.

Parameter	Explanation
Support Manual Discount for Quantity Sale of Unit-Priced Items	This parameter allows a Retalix Loyalty Manual Discount to be applied to all non-MSU items sold using the QTY key.

Note:

There is no change to how Keyboard Function 1412 is used for Multiple Selling Unit (MSU) items (a.k.a. split pricing). The POS discounts the price of the last item when the Keyboard Function is used. For example, if a 10% used on an a line item selling 3 @ 3 for \$1.00 and the last item sells for \$0.33 (based on the General System Parameter “MSU rounding option“ located in the Store \ POST \ Operation \ Scanning folder), the discount will be \$0.03.

Technical Reference Appendix

Out of Scope

A limitation of the new feature in this release is listed below (and was not addressed in development).

Note:

The limitations below are known as of this writing, and are provided in order to assist users and support personnel to plan, install and operate the capabilities described in this document. While Retalix endeavors to ensure that this information is correct and fairly stated, no attempt is made here to catalog all limitations that could be construed or that may become known in the course of use or experience.

FSD Number	Enhancement	Out of Scope
368240	Databar Family Code Wildcard Validation	Databar Family Code Wildcard Validation was added for the current release only (and will not be made to previous ISS45 releases).
382505	EBT WIC Eligible Benefits Only Parameter Removal I	The EBT WIC Eligible Benefits Only Parameter Removal was added for the current release only (and will not be made to previous ISS45 releases).
384654	Manual Discount Function Change	Any changes to how Keyboard Function 1412 handles MSU items.
