## System Changes for Installing ISS45 with Windows 7 Professional

This document is intended as a broad overview for configuring Windows 7 Professional on MFS1 prior to installing ISS45 Version 8. For details on installing and configuring SQL Server 2008 (steps 12 through 15 below), follow the instructions in the **Retalix SQL 2008 Installation Guide** or the **Retalix SQL 2008 Workgroups Installation Guide**.

- 1 By Default the Administrator Account is disabled in Windows 7 Professional so you must enable access to this account.
  - Click on **START**, enter **SECPOL.MSC** in the Search Box and press **ENTER**.

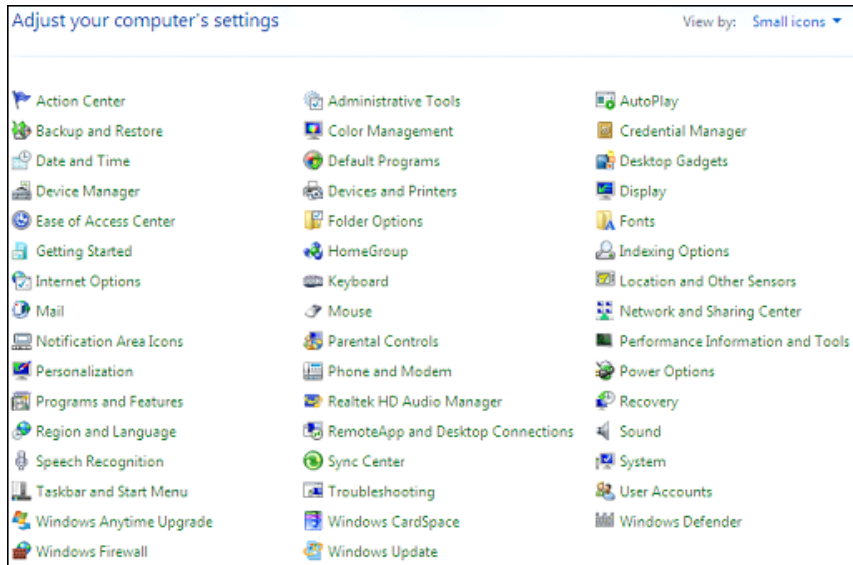

- The Local Security Policy Screen will open:

- Click on **Local Policy** -> **Security Options** and select **Enabled** for **Accounts: Administrator Account Status**.
- 2 Sign off the current Windows User and then sign in as Administrator with no password. Press **<Ctrl><Alt><Delete>** and select **Change Password**. Leave the current password field blank and enter the new password twice. Log off and back in as Administrator with the new password.
  - 3 Open the Control Panel and change the **View by:** setting to **Small Icons** (upper right-hand corner).

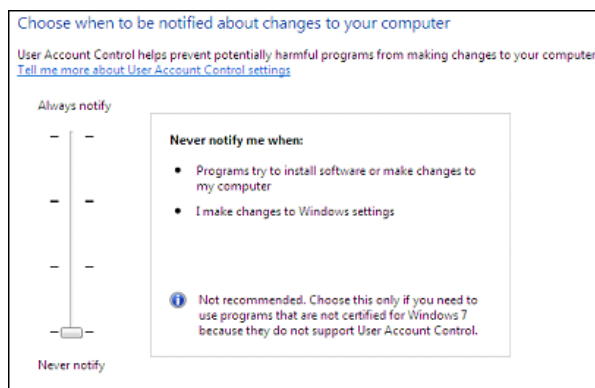

4 Click on **User Accounts**.

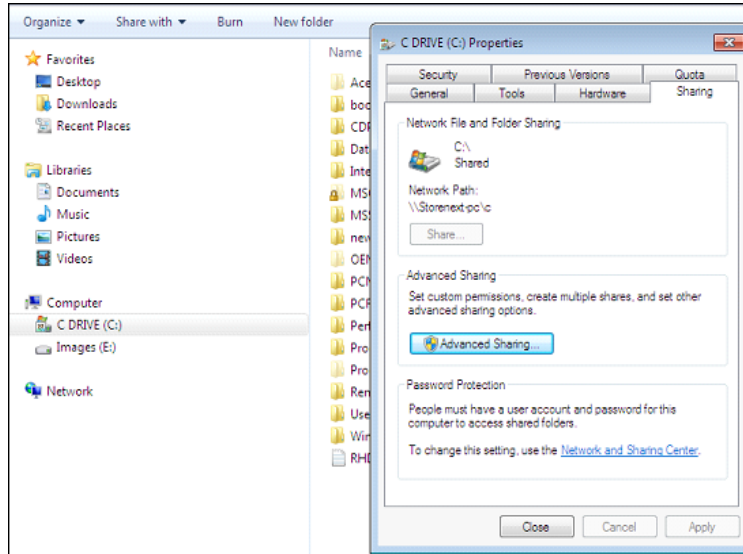

5 Click **Change User Account Control settings**.

6 Disable User Account Control by moving the slide bar all the way to the bottom (**Never notify**) and click **OK**.

7 By default the C: drive will not be shared and the administrator will not have any rights on the drive. Share the drive as C, add the administrator and set Full Permissions.

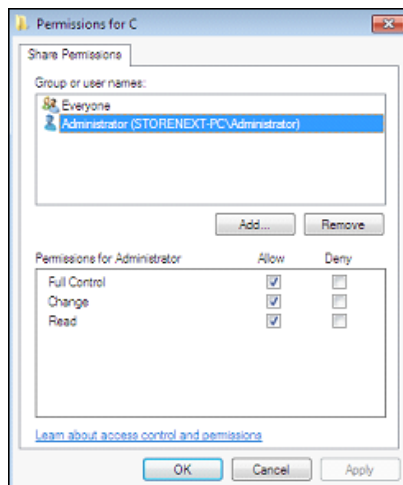

- Click the **Computer** icon from the Desktop.
- Right-click on the **C:** drive and select **Properties**.

- Click on **Advanced Sharing**.

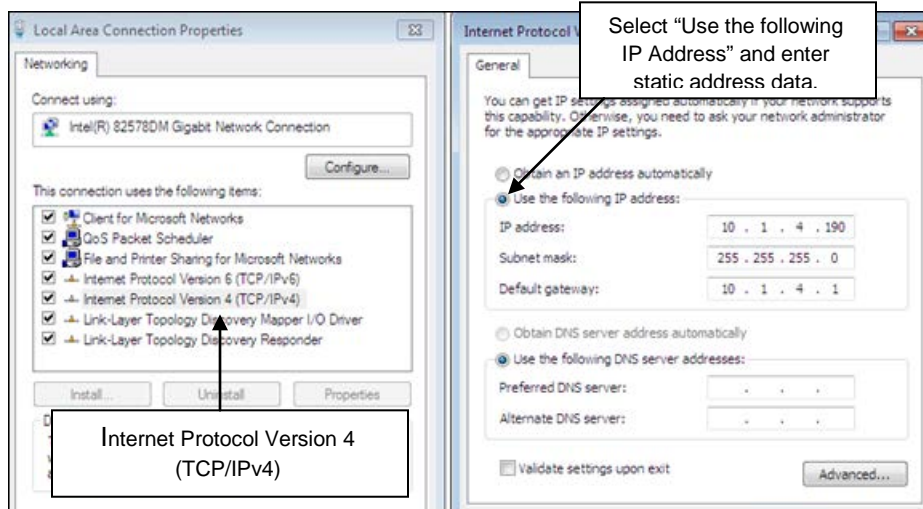

- Click the **Share this folder** checkbox and add a **Share name** of **C**.
- Click on **Permissions**.

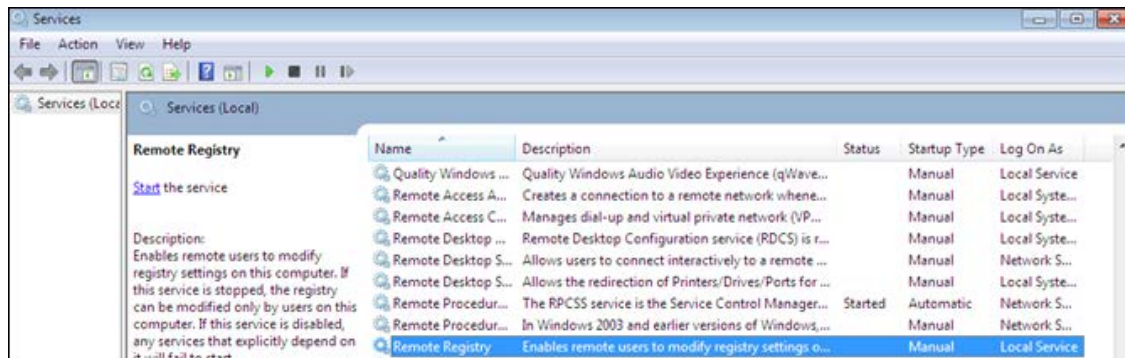

- Highlight the **Administrator** and check the **Allow** box for **Full Control**, **Change** and **Read**.

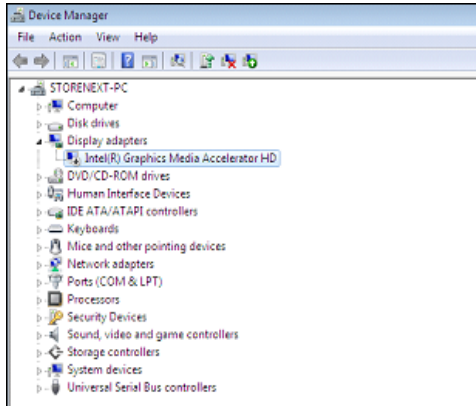

- By default the Network Card will be configured to obtain an IP Address automatically. ISS45 requires all terminals to have a static IP Address. Configure the Internet Protocol Version 4 (TCP/IPv4) function of the network card so it will communicate on your network (under **Network and Internet ->Network Connections**).

- By default the Remote Registry Service in Windows 7 is set for Manual Start and is not running. (In previous versions of Windows, this service had been set to automatic and always running.) ISS45 requires this service to be running to install MFS2 or any LFS terminal. It is recommended you set this service to Automatic Start (under **Services-> Services Local**).

- By default the drivers for the On Board Video Card (in Acer PCs) does not support a Full Screen Command Prompt Box but ISS45 requires this functionality. Disable the installed video card driver (under **Control Panel ->Device Manager -> Display Adapters**, right-click and **Disable**) and reboot the PC.

11 Verify a Command prompt window can be opened and toggle back and forth between full screen and normal screen.

- Click on **Start**, enter **cmd** in the Search Box and press **Enter**. The command window displays.
- Press **<Alt><Enter>** twice to toggle between both screens.
- Type **exit** and press **Enter** to return to the Desktop.

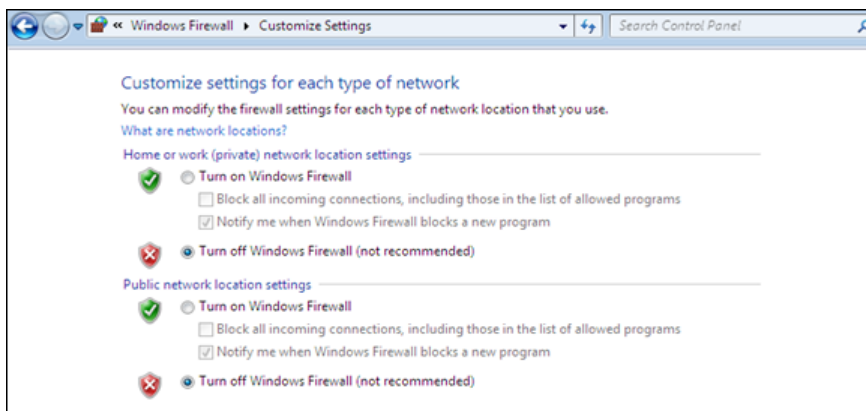

12 Install SQL 2008 for Workgroups (follow the instructions in the *Retalix SQL 2008 Installation Guide* or the *Retalix SQL 2008 Workgroups Installation Guide*). By Default the SA user must have a password set during the install of SQL. Make sure to remove this password before attempting to install ISS45.

13 Install the SQL 2005 Backward Compatibility Patch (as per the SQL Installation documentation).

14 Install SQL Server 2008 Service Pack 1 (as per the SQL Installation documentation).

15 Remove the password on the SA user in SQL (as per the SQL Installation documentation).

16 Turn off the Windows Firewall (**Control Panel -> Windows Firewall ->Customize Settings**).

17 Install ISS45 Version 8.
