

Technical Bulletin

Support Sunset for ISS45 Version 8160

POS-TECH-16:01
January 22, 2016

Support Sunset (end of support) is declared for all releases of ISS45 version 8160.

NCR supports:

1. The current up-level release, and
2. The latest-and-greatest level of the previous major release.

When a new major release is provided — after a 90-day grace period to gain familiarity with that new release — support is withdrawn for the older of the two previously supported releases.

The grace period for ISS45 8160, triggered by the September 5, 2015 introduction of ISS45 8180, is complete. NCR now provides ISS45 support for:

1. The current up-level release of ISS45 8180
2. The current up-level release of ISS45 8170

NCR accepts telephone or other requests for assistance, incident or fault reports, provides fixes and considers enhancements exclusively for these supported releases.
