## ISS45 7.5 — Major Release and New Features

MB-ISS45-1136  
August 26, 1998

ICL is very pleased to release Version 7.5 of **ISS45**. This release contains maintenance items, but the large number of new features include many that your users may find exciting — especially the major enhancements made to enhance the terminals' offline mode. The following pages contain descriptions of the most important new software features.

**ISS45 7.5** is released on an all-new CD-ROM, containing sets of new Windows NT and DOS installation files, a new LoadMaker™ and update routines for older versions. The updates will work for either DOS (in-store or LoadMaker™) or Windows NT systems. The PoS Terminal software upgrade file is intelligent and discriminates between all 7.4.x software loads — that is, it will update all 7.4.0 — 7.4.4 software to 7.5 automatically. The office software must be first upgraded to Version 7.4.4 prior to upgrading to 7.5 since the 7.5 update release for the back office is specifically against 7.4.4.

The new CD-ROM contains many useful items, including:

- The Software Description Document, complete with a detailed listing of supported and validated terminal hardware, including IBM, NCR and SNI terminal models.
- Complete set of **ISS45** presentations updated with 7.5 features
- Hardware diagnostics
- An array of new documentation
- Updated Frequent Shopper Express/Streamliner and Back Office Option software
- Frequent Shopper RoundHouse — demonstration of the released version
- Special files for PIP configurations
- New **ISS45** Customer Proposal updated to include 7.5 features
- Year 2000 TeamPoS upgrade driver

The **ISS45 7.5** release also includes an updated Electronic Library. The new **ISS45 7.5 Release Notes** manual is included, as well as updated versions of several other technical manuals affected by the new software.

Hard copies of the new manuals, the software CD-ROM and the electronic library have been shipped to all **RETAILpartners** in good standing.

To Your Success,

*Tony*

*Tony van Severter*  
*Director: Supermarket Systems*

## ISS45 7.5 NEW FEATURES

- **The cashier file is now resident** and automatically maintained at the PoS terminal. This enables correct sign-on when the terminal is off-line.
- **The bad accounts file is now resident** and automatically maintained at the PoS terminal. This enables correct use of this information when the terminal is off-line.
- A new **limit for food stamps** in drawer has been added, operating in a similar fashion to the cash in drawer limit.
- When **suspending an order**, the shopper's ID can now be recorded. The clerk can recall the transaction just by using the shopper's ID. The clerk can also enter the transaction number or scan the suspend ticket.
- **Suspend/Recall** is now available in off-line mode.
- Cashiers can now **change their password** at sign-on.
- The NT versions have been enhanced with **add-ons to use a backup PC** as the Corema server.
- When using multiple/split tenders the system can now **print the remainder due** on the receipt after each tender.
- Control checks to enable **sign-on or suspend/recall in offline mode** have been added.
- **Additional HALO/LALO type control checks** have been added for maximum or minimum amounts on a negative transaction, and scanning quantity limits.
- A **function key for check tender** has been added. The clerk can select the different types of checks with which the shopper is tendering.
- A **function key to suppress bonus coupons** on a vendor coupon has been added.
- **Printer port configuration** has been improved on the PoS terminals to select from multiple RS-232 ports available.
- **Terminal configurations** to select DynaKey™ or TeamConsole™ for soft keys have been added.
- To improve customer service, the Control Check system has been enhanced to allow supervisor authorization to **wait until the end of order**. This way, checkout can proceed without stoppage and shoppers will not have to wait for a supervisor to appear in the middle of an order. At the end of order, the supervisor must authorize the controlled issues.
- **Frequent Shopper** savings dollars and/or points are now accumulated by the Advanced Promotions/Member Card system and can print on the shopper receipt.
- A **five-digit store number** can now be used. This number can also be used in the cashier bar code.
- **Inaccessible fields** are now shown in blue on the NT screens of the back office.
- **Tax exemption flexibility** has been added when using the in-house charge posting system.
- The **last order** performed by a cashier can now be viewed directly from Cashier Maintenance.
- A **"Last Ticket" search option** has been added to the Electronic Journal showing the most recent order for a cashier.
- **Saved Transactions** now print in full detail on the Electronic Journal with or without the Reorganized Receipt feature in force.

- Entry and Exit from **ISS45 Training Mode** is now recorded on the Electronic Journal.
- The **TeamConsole** (SNIKey) can now be directly configured with the TeamPoS terminals.
- A **new PBRCOPY command** is available to developers to copy files from one **ISS45** MFS to the other. Automatic retries are specified if the copy fails.
- The system now shows the **number of items** returned when executing a return of items under a multiple selling unit scenario.
- **Record and Playback: ISS45** can now record and play back keystrokes, along with copies of the associated screens and reports. This enables execution of a routine at one location with replay at another.
- A new daily or weekly **Cashier Transaction Report** has been added,
- A new daily or weekly **PoS Terminal Transaction Report** has been added.
- The **Saved Transaction Report** has been enhanced.
- The **Daily/Weekly ROA/Paidouts Reports** have been enhanced.
