

New Features — ISS45 7.7.1_54 (and _53)

MB-ISS45-1173
December 5, 2001

Fujitsu is pleased to release ISS45 Version 7.7.1_54. This is a “Minor” release, designed for maintenance, but there are several new features also provided. This release is now available on the ISS45 Web Site at <http://www.iclretail.com/support/iss45/index.html>. Please see the Patch Table provided on the site for the list of fixes and enhancements, and the update itself.

Besides the maintenance provided, new features include:

- MicroTrax Gift Card Support: 7.7.1_54 sites with MicroTrax can now access and operate the MicroTrax Gift Card system. Note there is a setup document provided with the software on the FTP site.
- The MICR reading of the check has been expanded to 25 digits, reading the Bank or “routing” number and can convey the additional information to check verification services. This is useful in areas where two different banks may have established the same series of checking account numbers — without the bank number, a good account in one bank could be mistaken for a bad account in another. The length of the number field read is controlled in the Tender Maintenance area. NOTE: this enhancement does **not** apply to the internal check file, which does not have room to store the additional bank routing digits.
- Additional manager auditing is now available. When managers insert, update or delete PLUs or modify the Frequent Shopper field (frequent shopper discount number, name change, frequent shopper discount value change) the time of the data changes are logged and the name and number of the user who modified data is logged for audit.

In October, 7.7.1_53 was released, including:

- Setup parameters were clarified for use of the Single Cable Scanner option.
- OPOS keyboard support, including MSR and Keylock was added.

To Your Success,

Tony
