ISS45 ASCII Extracts for V7 and V8

MB-ISS45-1188
December 13, 2002

StoreNext Retail Technologies is pleased to announce a new ASCII Extract utility for ISS45 Versions 7 and Version 8.

With this utility, users can query the V8 or V7 Transaction Logs to extract item, department etc. data depending upon parameters. Even better, this includes an end-of-day hook so that it can be automatically run every EOD. In V8 the resulting ASCII file is put into the Export folder, and in V7 it's stored in a specific directory.

The resulting files can be post-processed into Excel or another database for analysis.

StoreNext is providing this to Dealers and end users at no additional charge as part of your Professionals Services and Support. To get the new utility, go to the StoreNext Dealer Support Site at www.StoreNext.com/Dealer. You'll find the link here from the Software Support area of the site.

A new manual explaining this new system has also been produced – it's available both with the FTP of the software and in the Software Manuals area.

To Your Success,

Tony
Antony van Leventer
