

RBO – Retail BackOffice

Advance your store to the forefront
of cutting-edge technology.

The only IT company totally dedicated to serving independent grocers and small chains now offers a complete in-store solution over the Windows® operating system. From the loading dock to the parking lot and every step in between, StoreNext's cutting-edge solution integrates your in-store PoS systems and gives you the power you've been waiting for. The power to move ahead of the competition.

RBO: The next level in PoS software is at your front door.

In today's breakneck marketplace, independent grocers need to be assured that what comes in the back door will speed out the front and feed the bottom line. So take an independent look at RBO™, an advanced back-office system for in-store management that's now available from StoreNext.

RBO is the definitive Windows®-based solution for ISS45™ and ScanMaster®. In fact, RBO is the only fully integrated back office for these premier industry POS systems, featuring an integrated menu structure for the combined applications. With a single vendor providing both the PoS and the back office, grocers benefit from the unmatched coordination of their combined in-store systems.

RBO gives complete front-to-back-door control over inventory, pricing, signage and reporting. With instant, on-line access to item tracking and other pertinent in-store information, independents now have at their fingertips the data – and power – they need for real-time decision-making. And to get these benefits right away, grocers currently using BASSPoiNT® or RBX can also implement RBO as a first or second step in their forward migration plan.

The world's most advanced back-office system also offers seamless components for DSD receiving and verification with handheld terminals; an online PoS interface; customizable pricing management; sign and label printing; flexible reporting and other individualized options. It provides host support using the Standard Interchange Language (SIL) format, and its ability to offer multiple methods of item maintenance – both “forms” and “grid” – make various item maintenance tasks easier to perform.

If you're coming from a former landmark RBX system, you'll also find RBO's style to be intuitive and faster to learn than other systems. And its open-architecture ensures RBO won't back you into a corner when the time comes to adapt your system to future technological innovations.

On your way to the next level, make StoreNext your next stop.

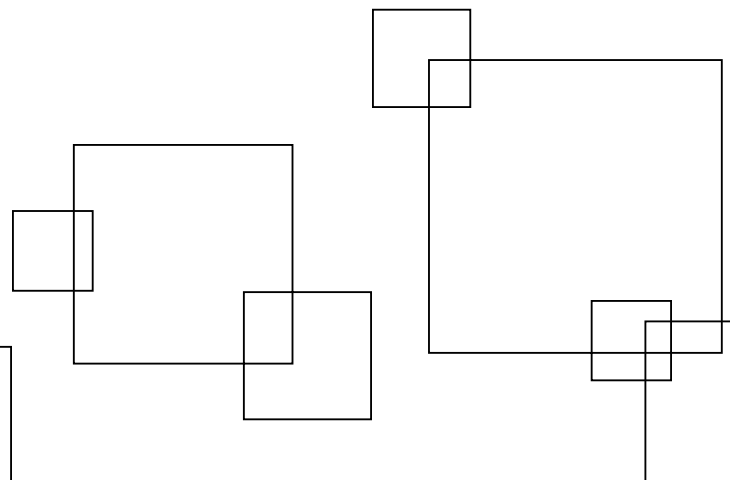

StoreNext is a joint venture between Fujitsu, a worldwide technology leader, and Retailix, one of the world's leading providers of integrated software solutions for the retail food industry. Founded in 2002 to serve the needs of independent grocers and small chains, StoreNext offers IT products and services that make it possible for smaller grocers – for the first time – to compete on a level playing field with mammoth chains.

And with RBO for ISS45 and ScanMaster, you don't have to worry about finger-pointing or waiting for features on your POS to be supported by the back office - or vice-versa. With StoreNext providing both these critical products - with carefully coordinated features, files, testing and release timing - you benefit from the unmatched coordination of your in-store systems, now and in the future.

Features and Benefits

What does RBO have in store for you?

- The definitive Windows®-based retail software solution for ISS45 v7 and v8

About StoreNext

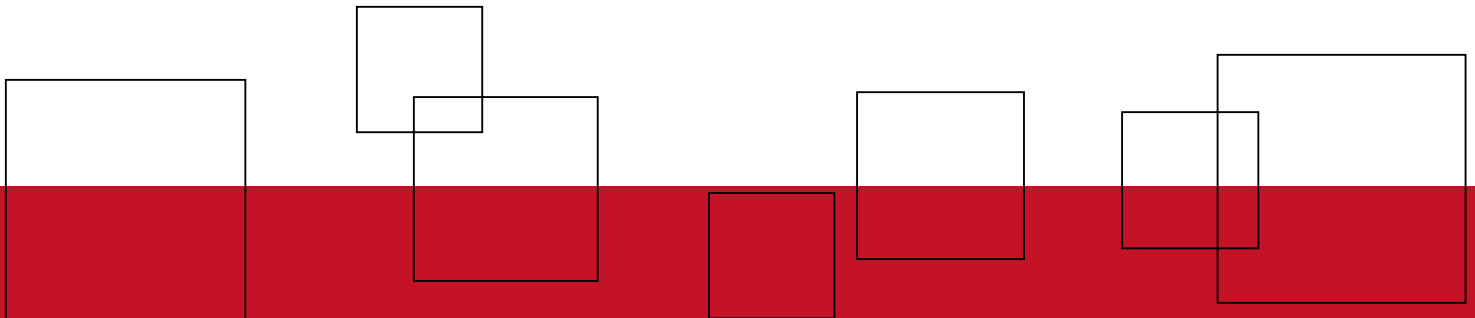

StoreNext is the No. 1 supplier of retail technology to independent grocers and smaller chains and is the only IT company completely committed to serving their needs. StoreNext was created in 2002 as a joint venture by Fujitsu, a worldwide technology leader, and Retailix, one of the world's leading providers of integrated software solutions for the retail food industry.

StoreNext markets Fujitsu PoS hardware, ISS45 & ScanMaster software and Internet connected services for managing stores via Web-enabled applications. Our focus on relentless cost reduction not only helps independents achieve greater ROI in the short term, but also provides smaller chains with IT solutions which allow you to compete on a level with the largest retailers.
