NCR ENCOR

Grocery retailers have never been under more pressure to meet shopper demands and stay ahead of competition, but legacy POS systems too often just can't keep up. Today's shoppers are less loyal, and since they have many new choices in how to purchase food, traditional grocers must provide engaging and hassle-free shopping experiences inside the stores to keep their customers coming back.

ENCOR helps grocers achieve this, with a modern POS solution that delivers more than point-of-sale — it's a complete platform of service.

NCR ENCOR includes all the tools to effectively optimize store operations and streamline the checkout process. With ENCOR, retailers can leverage their current POS hardware investments while accessing an open architecture that supports omni-channel shopping and provides their shoppers with rich experiences regardless of where, when or how they shop.

Now including the powerful Store Financial Spreadsheet, Enhanced Store Balance Report and Accounts Receivable packages from NCR's ACS-IR and ScanMaster POS, ENCOR brings together the industry's most exceptional capabilities into its dynamic modern architecture.

The best of both worlds: Proven reliability with a modern touch

ENCOR combines the speed and robust capabilities of NCR's industry-proven POS systems with the latest technology innovations to enable superior shopper experiences inside the store.

The solution includes the features grocers have come to expect from NCR, plus a completely new user interface. NCR NavApp provides a familiar browser-like look and feel, and an optional NCR DynaKey user interface is also available — demonstrated to reduce cashier errors and further streamline the checkout experience.

ENCOR includes proven back office functions, which were previously offered as an optional NCR stand-alone solution. This powerful system maintains item master data, including category classifications, vendor management, pricing tools and the item attributes needed to support POS transactions and ancillary store systems such as label printing and produce/perishables scaling solutions.

ENCOR helps to simplify inventory management with DSD receiving, invoice reconciliation, and detailed invoice and billback reporting. Physical inventory counts, cycle counts, inventory adjustments and transfers are all supported to help maintain an accurate perpetual inventory balance. ENCOR also includes office tools to optimize cash management efficiencies.

Any grocer currently using NCR's ISS45, ACS-IR or ScanMaster POS platforms can use an outstanding migration offer to move up to ENCOR. This cost-effective conversion requires minimal training. And since ENCOR runs on most NCR POS hardware, you can leverage your existing investments while you future-proof your POS ecosystem.

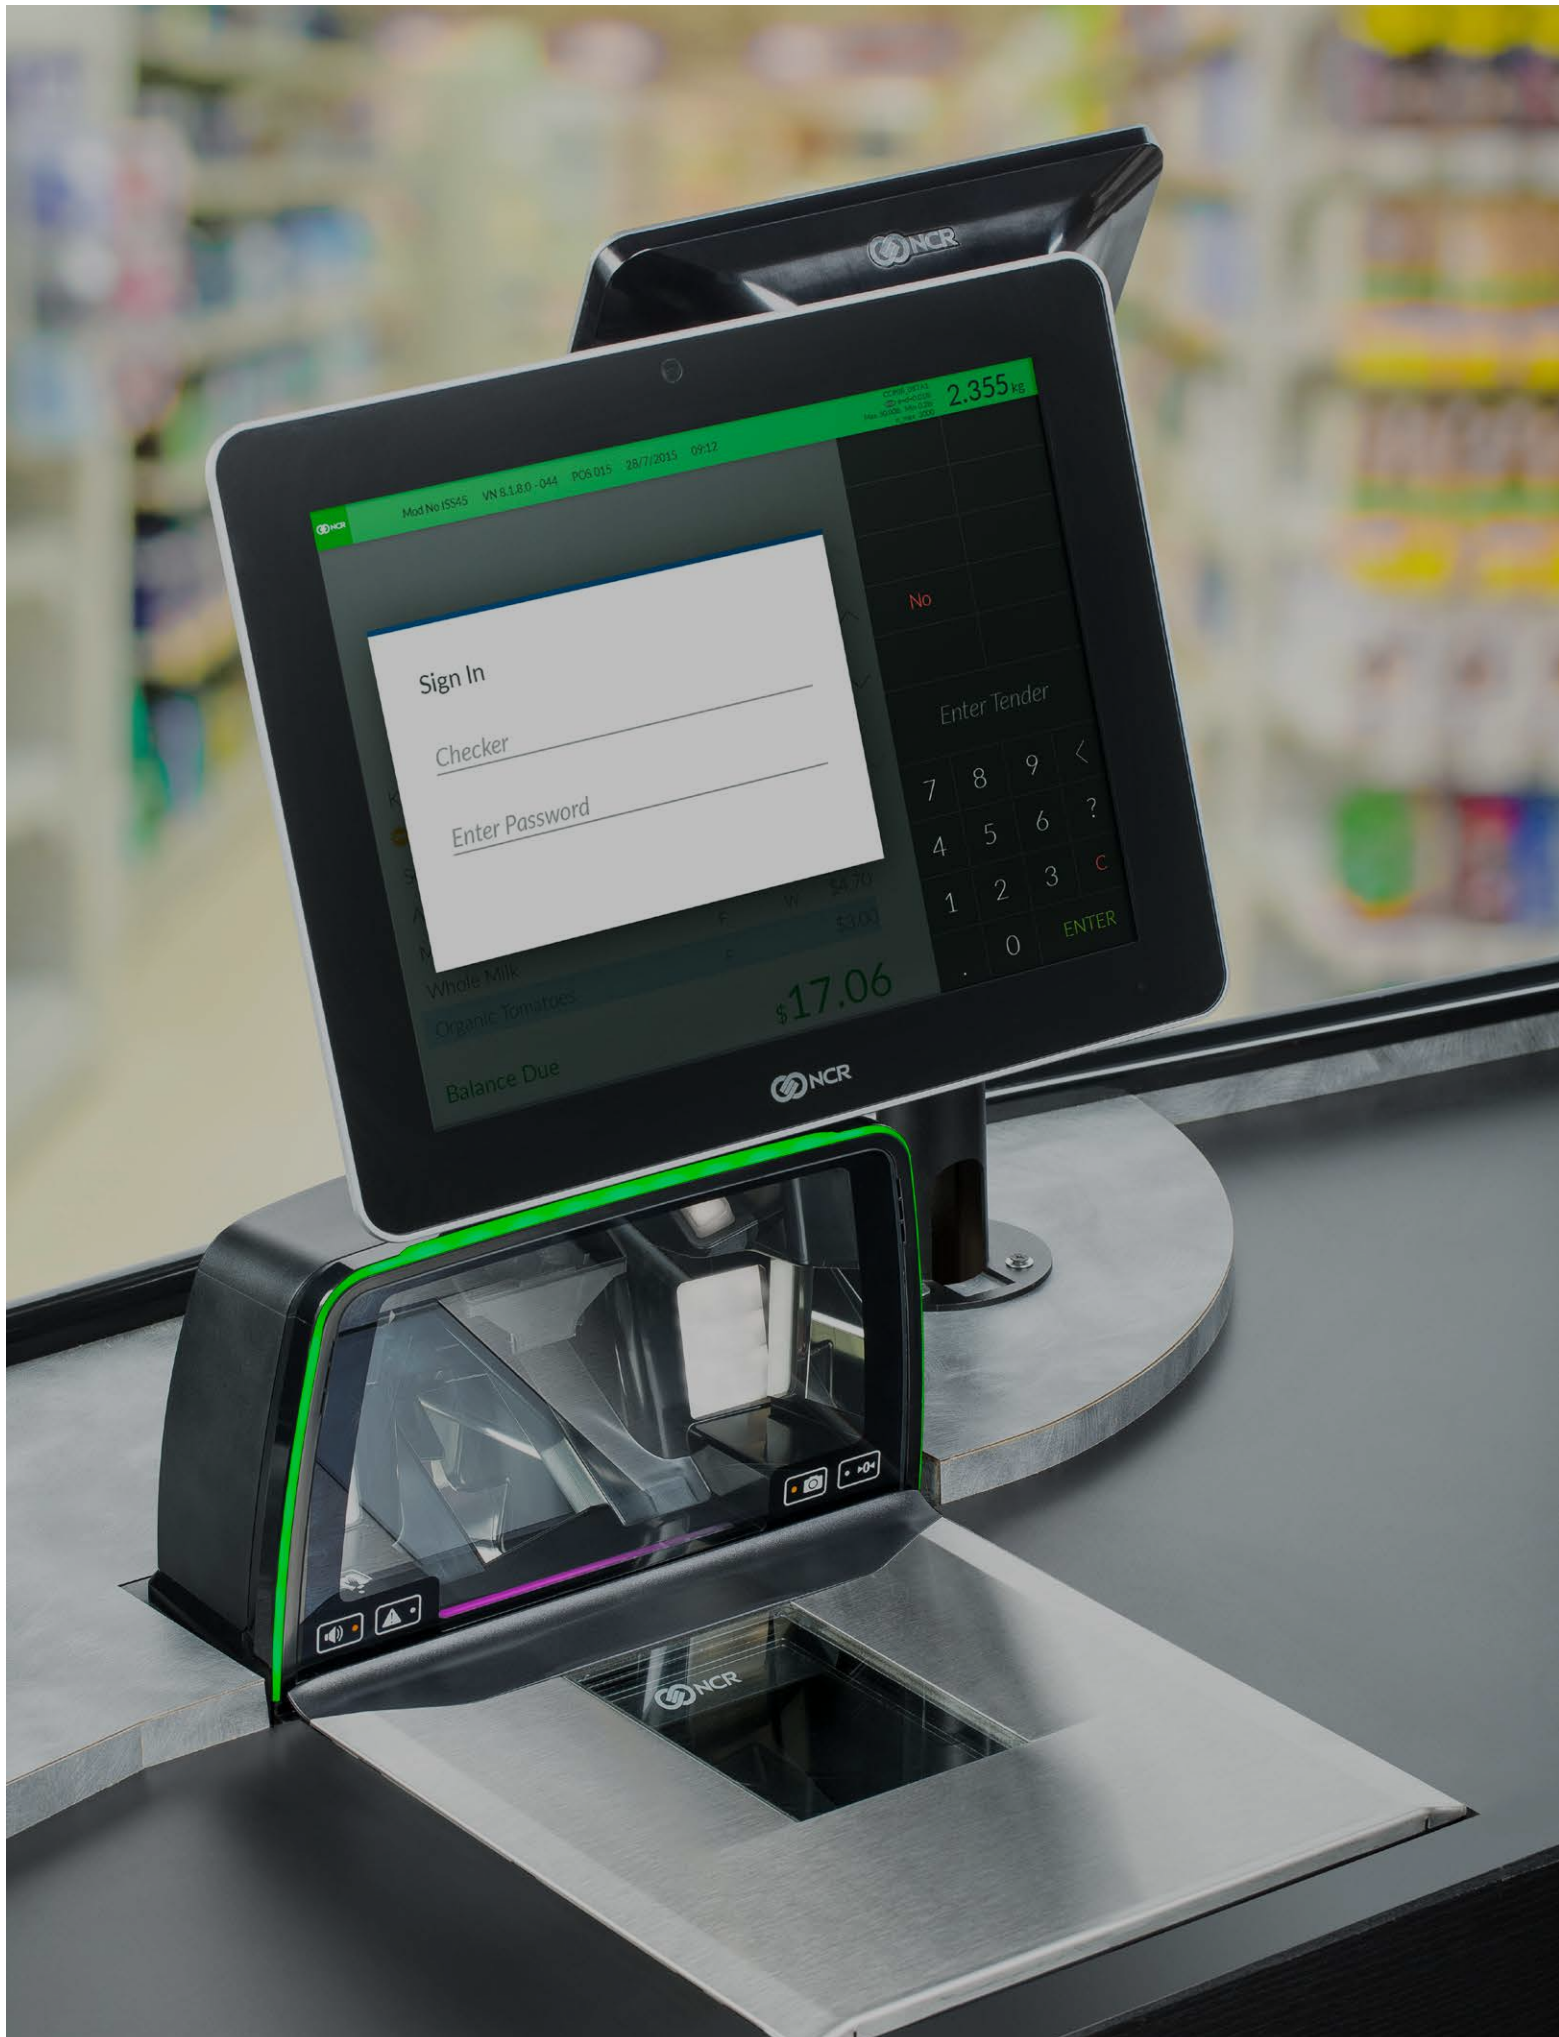

Product benefits

- **Flexible:** Store-level configurations help retailers customize POS functions based on store layout, individual lane design and future growth plans.
- **Scalable:** Support a single store or an entire chain with centralized management and reporting — or use ENCOR's interfaces with existing back office solutions.
- **Complete:** Manages store operations beyond the POS, including item master, DSD receiving, perpetual inventory, cash office processes and electronic data imports and exports.
- **Cloud-enabled:** Open architecture and APIs provide secure operations with integration to NCR solutions and third-party services, enabling click-and-collect and other omni-commerce shopping experiences.

Why NCR?

NCR is a leading technology company that brings unexpected value to every interaction between consumers and businesses. The **#1 global grocery, C-store and drug store POS software and #1 self-checkout provider**, we provide software, hardware and services that run the entire store.

Leading with digital, we help FDMM retailers differentiate, compete and win by connecting every touchpoint into the frictionless, “always on” experience consumers want today, while enabling tomorrow’s innovations. From mobile to brick-and-mortar, from back office to loyalty and beyond, we help retailers bridge their digital and physical operations, transforming transactions into meaningful interactions — no matter where they happen.
