

# UPDATE

## ISS45 and ScanMaster POS Compatibility Statement with EMV Capability

June 10, 2015

The addition of EMV capability to an ISS45 or ScanMaster POS system with Connected Payments does not affect the POS application software in typical circumstances.

- EMV capabilities are provided solely within the Connected Payments/OpenEPS payments software and payment terminal hardware.
- The ISS45 and ScanMaster POS applications do not require any updates for EMV support and are not affected by EMV processes. No ScanMaster or ISS45 POS software updates have been made to accommodate EMV or are being considered. No EMV-related issues to date have been brought to the attention of the ISS45 or ScanMaster Support or Development teams.
- Similarly, modifications to the ISS45 and ScanMaster POS *interfaces* to Connected Payments (the OpenEPS interfaces) are not required for EMV support.
- New Connected Payments and/or OpenEPS software is being released by NCR Global Payments with enhanced capabilities for EMV support. Supported releases of ISS45<sup>1</sup> and ScanMaster<sup>2</sup> POS software will be certified in combination with the updated payments software upon its General Release. Certified combinations will be posted on the Solution Provider Website on the Connected Payments Compatibility Matrix.
  - Note that ScanMaster or ISS45 software upgrades may be required if the currently installed POS release is too old for compatibility with the necessary up-level payments components.
- WinEPS is not compatible with EMV and will not be enhanced to provide EMV support.<sup>3</sup>
- ScanMaster V1 is not compatible with OpenEPS and EMV support is not available. The final ScanMaster V1 release was in July of 2009 and support is no longer available.
- ISS45 V7 will not be certified with EMV. Support for ISS45 V7 ended in 2012, and all ISS45 maintenance has since been provided via ISS45 V8. V7 users<sup>4</sup> may install and use V8 without ISS45 application software upgrade fees.

---

<sup>1</sup> 8.1.7.0-xxx and 8.1.8.0-xxx

<sup>2</sup> 2.09.00-xxx and 2.10.00-050 (when released)

<sup>3</sup> See the [WinEPS Withdrawal from New Sales](#) announcement on the Solution Provider Website.

<sup>4</sup> With valid ISS45 licenses currently on ISS45 SMS.
