

Update Bulletin

New ISS45 Software Options

March 1, 2006

StoreNext has recently released several new options for ISS45 systems. And there are a few not-so-recent option releases too that you may have missed. Here is a summary:

SPECIAL WINEPS + ISS45 WINEPS INTERFACE FOR MOCHA

For Mocha systems *only*, StoreNext is running a special low-priced package of the full WinEPS/OpenEPS store software and the POS interface. This combination normally retails for \$3,495 list, which some might suggest is a little spend-y for a 1/2/3-lane grocery stores. So this new ISS45 Mocha Payments package (and one just like it for ScanMaster Mocha) is aggressively priced at \$1,695 and standard dealer POS software discounts apply.

Order:

| PIN | Item | Price | Inst | Maint |
|-------------|--|----------|--------|--------|
| 45180/065 | ISS45 Mocha WinEPS Electronic Payments Package — includes WinEPS/OpenEPS software and ISS45 WinEPS interface | \$ 1,695 | \$ 100 | \$ 800 |
| SM45180/065 | ScanMaster Mocha WinEPS Electronic Payments Package — includes WinEPS/OpenEPS software and ScanMaster WinEPS interface | 1,695 | 100 | 800 |

ISS45 GIFT CARD OPTION (BLACKHAWK)

This V7 or V8 option enables the store to sell and activate gift cards, in particular the current leading gift card system from Blackhawk. Single-pass code 128 cards are read, parsed and activated with post-transaction authorization for additional security. For details, see the new user manuals,¹ but be aware that the full gift card handling system in V8 is very powerful and flexible, and you and your customers may find this useful for new purposes down the road.

Requires Version 8.11.0-050 or Version 7.11.0-050 (spring 2006). Order:

| PIN | Item | Price | Inst | Maint |
|-----------|--|--------|--------|--------|
| 45180/084 | ISS45 Gift Card Option/Blackhawk (V7 and V8) | \$ 995 | \$ 100 | \$ 100 |

¹ Check the Gift Card and the unaccountably-named “Barcode Programming” sections in the User Reference manuals.

ISS45 ENHANCED BIOMETRIC OPTION

With the ISS45 8.10.1-060 and 7.10.1-050 releases, StoreNext ISS45 supports Pay By Touch and BioPay via the WinEPS interface at no additional charge.² ISS45 V8 also provides an “enhanced” Pay By Touch interface that enables the store to use Pay By Touch for age ID and shopper loyalty identification. This software is available as a V8 option — it is not available for V7 at this time.

For additional information, see the [Pay By Touch Brochure](#) on the StoreNext Dealer Support Web site. Order:

| PIN | Item | Price | Inst | Maint |
|------------|---|--------------|-------------|--------------|
| 45180/081 | ISS45 Enhanced Biometric Option (V8 only) | \$ 995 | \$ 100 | \$ 100 |

ISS45 MOBILELIME OPTION AND INTERFACE

MobileLime provides loyalty and cell-phone based payments with a solution that is gaining momentum in the market. StoreNext has interfaces to MobileLime with both V7 and V8.

For additional information, see the [MobileLime Case Study/Sales Sheet](#) on the StoreNext Dealer Support Web site. Order:

| PIN | Item | Price | Inst | Maint |
|------------|--|--------------|-------------|--------------|
| 45180/080 | ISS45 MobileLime Option and Interface (V7, V8) | \$ 995 | \$ 100 | \$ 100 |

ELECTRONIC CHECK CONVERSION (ECC) AND CHECK IMAGING OPTIONS

ISS45 V8 supports Electronic Check Conversion/ECC and Check Imaging. With the new 8.11 release, grocers can now order just the ECC by itself (without the need for an imaging printer). The WinEPS/OpenEPS payments system is required in either case.³

StoreNext is now committing that V7 will support ECC (no imaging) as of the 7.11.0-050 release this spring – WinEPS will be required for this to operate. There are no current plans to support check imaging on V7.

For ECC and/or check imaging, order:

² At this writing, WinEPS is the only ISS45 software interfaced with ISS45 providing Pay By Touch or BioPay support.

³ The ISS45 Ingenico Payments Interface has been withdrawn.

| PIN | Item | Price | Inst | Maint |
|------------|---|--------------|-------------|--------------|
| 45180/078 | ISS45 Check Imaging and Electronic Check Conversion (ECC) Option (V8 only) ⁴ | \$ 1,595 | \$ 200 | \$ 200 |
| 45180/077 | ISS45 Electronic Check Conversion (ECC) Option (V7, V8 only) ⁵ | \$ 995 | \$ 100 | \$ 100 |

ISS45 SIGNATURE CAPTURE OPTION

This is the payments option you need if you want to do signature capture with ISS45. Note that the payments system and network requires support for this capability — see Marketing Bulletin 1164 (Payments Compatibility) for status.

Order:

| PIN | Item | Price | Inst | Maint |
|------------|---|--------------|-------------|--------------|
| 45180/076 | ISS45 Signature Capture Option (V7, V8) | \$ 595 | \$ 100 | \$ 100 |

ISS45 V8 TABLE EXTRACTS OPTION

With the 8.10.0 release in 2005, StoreNext introduced “Table Extracts” to V8. Table Extracts provides over 50 specific new SQL data tables. Each of these tables takes data out of V8’s system tables and puts it into a point-and-click front end that enables dealers in a few minutes to create all sorts of customized reports. Output can be in ASCII, Excel or XML.

For more information, see the [Table Extracts Product Update](#). There’s also a [Table Extracts User Reference](#) and an “[ISS45 Power Tools](#)” PowerPoint presentation to fold into your presentations. For the option, order:

| PIN | Item | Price | Inst | Maint |
|------------|----------------------------------|--------------|-------------|--------------|
| 45180/082 | ISS45 Table Extracts Option (V8) | \$ 595 | \$ 100 | \$ 100 |

⁴ Requires WinEPS/OpenEPS.

⁵ Supports ECC with no imaging or image storage capability. Requires WinEPS/OpenEPS. The V7 version of this option will be available with the spring 2006 ISS45 version 7.11.0-050 release.

ISS45 V7 TRICKLE FEED OPTION

This package enables grocers to feed data back to host almost continuously in small increments. The capabilities include:

- User-defined data selection
- Output in XML or ASCII format
- Creates an output file from ongoing transaction flow
- Timed intervals can be selected by parameters
- End-of-day process validates completeness

For more information, see the [Trickle Feed Product Update](#). There's also a [Trickle Feed User Reference](#) (a whopping 59kB so if you click, you can have it in front of you in one or two seconds). Finally, there's the "[ISS45 Power Tools](#)" presentation to help you sell these features to grateful grocers. But to get the option itself, order:

| PIN | Item | Price | Inst | Maint |
|------------|------------------------------|--------------|-------------|--------------|
| 45180/079 | ISS45 V7 Trickle Feed Option | \$ 995 | \$ 100 | \$ 100 |

Note: this product is provided as a standard feature on V8.

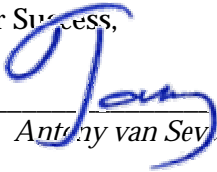

RBO OPTION FOR ISS45

The full RBO system is available as a low-cost option when a new ISS45 (or ScanMaster) system is purchased. See the [announcement](#) There are many RBO resources available on the StoreNext Dealer Support Web site (start on the [RBO All-In-One Page](#) or the [RBO Product Bulletin 1193](#)) but here are the PINs for this option, which can be used with either ISS45 V7 or V8.⁶

Order:

| PIN | Item | Price | Inst | Maint |
|---------------------|--|--------------|-------------|--------------|
| RB200L-45180RBO-SN | RBO New System Option for ISS45 ⁷ | \$ 2,995 | 500 | 18% of List |
| RB200L-45180RBOD-SN | RBO New System Option for ISS45 with DSD/Receiving | 4,995 | 500 | 18% of List |

To Your Success,

Anthony van Seanter

⁶ This option is also available for ScanMaster under different PINs.

⁷ Available only at time of purchase of complete ISS45 or ScanMaster hardware/software system. This PIN must appear on the same Sales Order as the rest of the system.
