

Update Bulletin

ISS45 Concord Interface – No Longer Available

October 23, 2009

The “Concord Interface” was formally withdrawn from new sale 3½ years ago in March 2006.

Since that time, StoreNext has continued to support existing installations with the existing interface version in new ISS45 V7 and V8 releases.

For many reasons – including data security and PCI requirements which the interface fails to meet – StoreNext has removed the Concord interface from current versions of ISS45.

The final releases that include the old Concord Interface capability are:

- ISS45 V8 – 8.1.3.0-090
- ISS45 V7 – 7.1.3.0-070

Customers upgrading beyond these releases must implement Connected Payments or WinEPS.

Note: As promised at the time of the initial Concord withdrawal in 2006, StoreNext has also provided limited numbers of new licenses for the ISS45 Concord Interface to customers installing additional sites for consistency with existing stores in a chain. This option is no longer available; no future licenses will be sold.
