

Connected Payments

SOFTWARE AS A SERVICE

KEY BENEFITS

Enables single-point reporting and management of all electronic payments chain-wide

Protects data and transmissions via PIN-Pad-to-Processor encryption and tokenization

Tightly integrates in-store payments with industry-leading capability set

Alerts staff of hardware or communication problems

Cuts initial investment costs, lowers transaction expenses and eliminates maintenance charges

For years electronic payment costs and compliance have been a big worry for retrailers. And for good reason. Industry mandates, emerging technologies, changes from the card associations and other concerns force a continuous stream of new rules and rollouts. The costs to keep up with these changes can be enormous.

But with Connected Payments, your worries are over—from a cost and a compliance perspective alike. Connected Payments is a software-as-a-service solution that centralizes your electronic payments' management and reporting across the enterprise, while minimizing transaction expenses and automating payments software and compliance updates.

Connected Payments is your most practical solution to a never-ending series of costly changes and worrisome compliance issues.

PRODUCT HIGHLIGHTS

Centralized management of electronic payments

Isolation of cardholder data from POS system

Data and transmissions encrypted from PIN pad to processor

Automated implementation of new software PCI mandates

Centrally updated configurations, flows, prompts and limits to lanes, stores or chain level

Receipt retention and signature capture for all electronic payment types

Tracks all changes or swaps to installed PIN pads

Auto Tender Resolution determines available transaction types

WIC EBT (eWIC) capability with all participating online WIC states

Centralized, multi-tier reporting and payments analysis

Integration and support for multiple/simultaneous processors and in-lane hardware

CUT YOUR ELECTRONIC PAYMENT COSTS ON DAY ONE.

Connected Payments solves a wide range of electronic payment challenges with an advanced online solution. The ability to eliminate up-front investment concerns, coupled with a low-cost subscription rate, gives you immediate and measurable ROI.

Featuring a sophisticated in-store payments engine powered by network operations, Connected Payments offers greater flexibility, more efficient data collection and streamlined reporting processes. Software enhancements and updates are applied automatically from the data center, eliminating compliance delays and lengthy rollout schedules.

Data is encrypted throughout the entire transmission cycle, from the swipe at the PIN pad to the processor. All cardholder data is also encrypted and truncated for secure data center storage outside your enterprise, adding layers of safety and dramatically reducing PCI compliance costs and risks.

A TECHNOLOGY BREAKTHROUGH.

With Connected Payments, your payment systems run in our secure data centers, not a store PC. You can:

- Reconcile, consolidate and report across groups of stores or specific dates.
- Monitor your communications and hardware status chain-wide
- Locate and drill down to any transaction from any store, then just click to e-mail proof of disputed tickets to your processor—including the signature.
- Use the centralized configuration dashboard to update your payment setup, prompts and transaction flow
- Automatically time the application to the stores you select.

Most importantly, Connected Payments is no mere stand-alone encryption product. It's a true payments solution, complete with the industry's most powerful payment engine, centralized system-wide control, monitoring and tracking of status and hardware assets. Connected Payments offers the strongest encryption and data protection system in the industry—with no extra cost or per-transaction fees.

That's why Connected Payments will pay off for you.
