

# Connected Cashier Analyzer

SOFTWARE AS A SERVICE

## KEY BENEFITS

Identifies the most serious cashier problems instantly, based on priorities, operations and schedules

Isolates cashier mistakes and incorrect transactions

Provides visibility into cashier key performance indicators

Drives store efficiencies

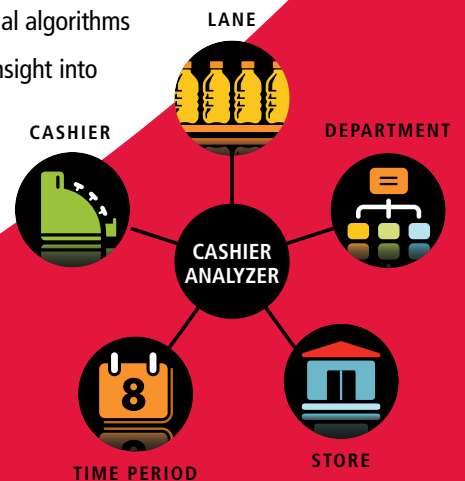

Improves day-to-day store operations with quick insights that translate to fast action

Lowers investment and operational costs

Programs to help retailers isolate cashier mistakes, incorrect transactions and training requirements have been around for years. Despite their obvious benefits, they have always been accompanied by high costs. Oftentimes, these costs can be more than the program's actual purchase price.

That's because most analysis applications lock you into a strict operational regimen—one that may be unrealistic for your own specific schedule, manpower and operations. And while the data may be helpful, the internal algorithms and calculations are hidden. The result leaves you with no insight into how conclusions were reached, and whether the issues uncovered apply to you and your store.

Connected Cashier Analyzer takes care of it all. You'll have the benefits—and the freedom—you want without the cumbersome costs.

## PRODUCT HIGHLIGHTS

- Color-coded dashboard view
- Risk factor menu that you weight and prioritize
- Cashier contribution reports
- Selectable filters and hierarchies
- Time (month/week/weekday/date), Cashier, POS number, Store, Department
- Drill-down capability by individual ticket
- Summary reports at a click
- Low subscription price

- Cashier Net \$
- Cashier Customer/Ticket #
- Cashier Item #
- Cashier Sale/Ticket
- Cashier Avg. Item \$
- Cashier \$/Hour
- Open Dept Ring \$/%
- No-Sales-Open Drawer (# and Tickets/Event)
- Voids \$/%
- Mgr/\$ Override %
- Discounts \$/%
- Refunds \$/%
- Cancels \$/%
- Vendor, Store & Bonus
- Coupons \$/%

## PUTTING RETAILERS BACK IN CONTROL.

With Connected Cashier Analyzer, you can choose and display the risk factors most likely to affect your store. These might include no-sales, needless voids, refunds, extra store coupons, or other key performance indicators (KPIs). Each of these factors can be weighted to properly reflect your particular store operations.

A color-coded dashboard instantly points out the issues of greatest concern. There are no complex menus to navigate. With just a single click, you can access detailed reports or drill down by store, time period, cashier, lane, department or even individual ticket.

Unlike other applications, Cashier Analyzer lets you set your own timetable. Rather than imposing a schedule of its own, the solution enables managers to choose how and when to implement changes, audits and training at the store.

## DRIVING EFFICIENCIES AT EVERY REGISTER.

When it comes to draining store profits, inefficient transactions can be just as harmful as fraudulent behavior. That's why Cashier Analyzer provides a wide range of cashier KPIs, giving retailers the information needed to monitor and train the workforce. For example, contribution reports reveal when an individual cashier's department sales deviate from the norm.

Additional KPIs offer even greater detail, viewable by store, time period, cashier, lane or department. These include more than 20 factors such as cashier net dollars, cashier sales per ticket, cashier dollars per hour, manager override percentage, discounts, refunds, cancels, coupons and more.

Information unlocks opportunities. With Connected Cashier Analyzer, retailers will have the insight needed to drive profitability through greater efficiencies and fewer losses—one cashier at a time.
