Introduction

New features were made recently to the ScanMaster system as a result of customer change requests. These changes are reflected in the accompanying 2.07.02-060 software.

These enhancements are explained in detail in the following pages but are not included in your ScanMaster 2.07.01 User and Installation Guides.

Optional Quantity Key Restriction for “@ a Price” Promotions

In previous ScanMaster releases, the Quantity key could not be used when selling items with “@ a price” promotions attached. A new POS Workstation Setting found in this release provides the option of removing this restriction.

The previous restriction was implemented because using the Quantity key on these items had the potential to cause erroneous promotion calculations. However, since this restriction can present a throughput problem in the lane (especially with produce items that frequently require the use of the Quantity key), a new optional setting is available in this release.

Note:

BRData® delivers many “@ a price” promotion configurations to ScanMaster.

New POS Workstation Setting

To support an optional Quantity key restriction for “@ a price” promotions, the following POS Workstation Setting is implemented in this release. (The tab where the setting is located within the ScanMaster System Configuration Editor is listed in brackets.)

No QTY Restriction on @ Promos [Promotions]

This field requires a Yes or No. When this parameter is set to “Yes”, the Quantity key can be used when selling items that have “@ a price” promotions attached. If set to “No” (default), selling items that have “@ a price” promotions attached must be sold individually.

LaneHawk Support for 92U Keyboards

The ScanMaster interface with LaneHawk is now supported in sites using Fujitsu 92U Keyboards.

When the LaneHawk interface window has focus (after totaling the ticket), the following keys may be pressed:

Clear – Used to clear the highlighted item from the LaneHawk items list. (The item will not be added to the ScanMaster transaction and is removed from the LaneHawk items list. This button is used when the item already has been added to the ticket, when the wrong item was detected or when the item will be added later).

Enter – Used to add the highlighted item to the ScanMaster transaction (without removing them from beneath the cart). The item will be removed from the LaneHawk items list.

Note:

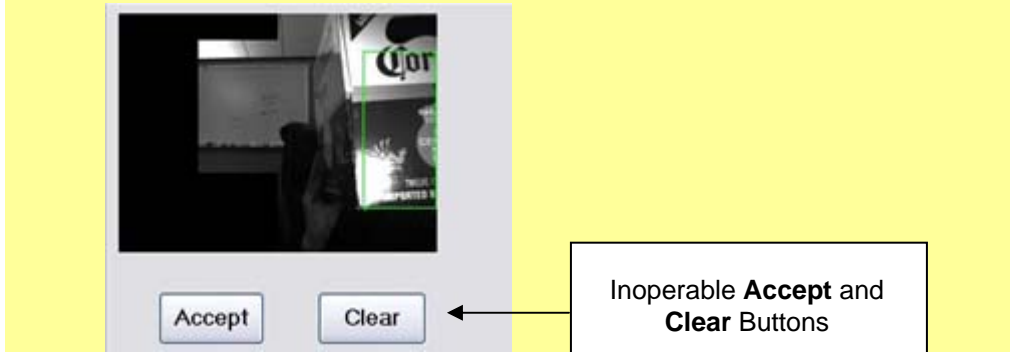

An item can also be added to the ScanMaster transaction by scanning the UPC code. Once LaneHawk items have been resolved and the list is empty, the LaneHawk interface application will return focus to ScanMaster. If the POS Workstation Setting “Retotal on LaneHawk Added Item” is set to “No”, the POS will proceed to Tender Mode when the interface window is closed. If the POS Workstation Setting is “Yes”, ScanMaster will return to Item Entry mode.

Up Arrow – Used to move up one item on the LaneHawk items list.

Down Arrow – Used to move down one item on the LaneHawk items list.

Note:

The **Accept** and **Clear** buttons will appear on the LaneHawk interface window but are inoperable.

When the LaneHawk interface no longer has focus (after “below the basket” item resolution has completed) processing continues as normal

Technical Reference Appendix

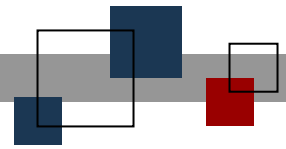

Out of Scope

Limitations of new features in this release are listed below (and were not addressed in development).

Note:

The limitations below are known as of this writing, and are provided in order to assist users and support personnel to plan, install and operate the capabilities described in this document. While StoreNext Retail Technologies LLC endeavors to ensure that this information is correct and fairly stated, no attempt is made here to catalog all limitations that could be construed or that may become known in the course of use or experience.

Enhancement	Out of Scope
Optional Quantity Key Restriction for “@ a Price” Promotions	The Optional Quantity Key Restriction for “@ a Price” Promotions is available for the current release only (and will not be made compatible with previous ScanMaster releases).
Diners Club Reporting Change	Modifications made to support the Diners Club Reporting Change were made for the current release only (and will not be made to previous ScanMaster releases).
LaneHawk Support for 92U Keyboards	Changes made to support LaneHawk with 92U Keyboards were made for the current release only (and will not be made to previous ScanMaster releases).
