Magellan 8500Xt and 8400 Scanner/Scale Firmware Upgrade

SS-TECH-10:12

April 27, 2010

Datalogic has released new firmware for the Magellan 8500Xt and the Magellan 8400 scanner/scales.

This new firmware addresses the following issues:

- 1) Corrects a timing issue with the enable/disable commands sent from the ISS45 POS which can result in the scanner failing to scan items.
- 2) Addresses a Canadian Weights & Measures requirement.

The Magellan 8500Xt and Magellan 8400 currently use the same firmware and the same configuration files. These firmware and configuration files are available from the StoreNext Dealer Support Web site: the current firmware is released as R96-9350.BIN – [click here](#) to access.

The current Configuration files are:

- R96-9124 is Pounds / no remote display
- R96-9193 is Pounds / remote weight display
- R96-9123 is Metric / remote weight display

The new firmware has been certified for use with the supported versions of ScanMaster and ISS45.
