

Technical Bulletin

Solidcore/McAfee v22 Patch and DLL

MISC-TECH-11:10

August 12, 2011

The Solidcore (McAfee) S3 SNSCSEC.DLL is installed when you install Solidcore from the current CD (part number 89000497). At the time of its release, v18 was the current version of that DLL.

Since the CD release, changes and corrections have been made to this DLL, and the current **v22** version must be applied manually. The latest integration batch at this time is 2.00.80 and should also be applied when installing.

The Solidcore Patch22 with the updated DLL v22 is available for download from the StoreNext Dealer Support Web site:

- [Release Table for Patch22](#)
- [Release Table for Integration Batch 2.00.80](#)

Please note: Solidcore support for Windows 7 and Server 2008 is in process with a new version due from Solidcore in the next 30-60 days. This new version will replace the current 4.8.3-3407 install and be compatible with all supported operating systems.
