U-Scan Dealer Setup Utility

SC-TECH-05:33 Issue 2

April 10, 2013

DealerConfig.exe is a setup utility provided for U-Scan. This utility allows the dealer to tailor the U-Scan system for individual grocery store operations.

Options that can be modified by the dealer are located in DealerConfig.exe and include:

1. **Background color:** The dealer may modify the background colors of the customer station by using this utility. It is advisable to select a color that contrasts nicely with the store's logo. To access the background color utility, complete the following steps:
 - Go to C:\robot\data\DealerConfig.exe
 - Under Configurable Options > Select Background Color
 - Select the color you want, then exit the utility.
 - The new colors will appear immediately

2. **Ten key keypad:** The dealer has the option to allow the consumer to be presented with a 10 key keypad whenever the consumer selects the produce/bulk option on the main checkout screen. This will allow a consumer to key in a PLU number rather than select a picture of the produce item from the produce charts. To enable the 10 key keypad, do the following:
 - Go to C:\robot\data\DealerConfig.exe
 - Under Configurable Options > Select ShowPLUNumberPad
 - If set to "TRUE" the number pad will be shown.
 - If set to "FALSE" the number pad will not be shown.

3. **Tender customizing:** The dealer has the ability to modify the location and add or delete tenders. The tender customizer is dynamic and will only allow the dealer to use tenders that have been unlinked from other locations on the screen. To modify the tender screen, do the following:
 - Go to C:\robot\data\DealerConfig.exe
 - The tender screen will be displayed.
 - Choose the tender to be modified and click the drop down box. The choices available will be displayed. Note the choices are dynamic and the options available will change for one tender if a previous tender is modified.
 - After making the changes, click Save Tender Layout.
 - Stop and start the customer station.
 - The changes will then take effect.
