### U-Scan Coupon Handling Options and Methods

SC-TECH-09:27  
November 24, 2009

U-Scan can be very flexible in handling coupons. There are seven different coupon-handling methods, and all of these are controlled by making a change to the registry:

```
HKCU\Software\OptimalRobotics\Devices\Display\Options  
CouponMethod = [0-6]
```

These seven methods are described below.

#### ***Method 0 (coupons are not scanned)***

After the shoppers select to pay for the order, they are asked if they have any coupons. If they do have coupons they are instructed to give them to the attendant. This sequence occurs whether or not there is a coupon detector installed.

#### ***Method 1 (scanned coupons are put in the slot separately, only if a coupon detector is present)***

After shoppers select to pay for the order, they are asked if they have any coupons. If they do have coupons and a coupon detector is installed, they are instructed to scan them one at a time and put them in the coupon slot one at a time. If no coupon detector is installed, the shopper is instructed to hand any coupons to the attendant.

#### ***Method 2 (scanned coupons are put in the slot all together)***

After the shoppers select to pay for the order, they are asked if they have any coupons. If they do have coupons they are instructed to scan all of their coupons one by one but insert them into the coupon slot all at once. This can be done whether or not there is a coupon detector present.

#### ***Method 3 (scanned coupons are give to the attendant later)***

After the shoppers select to pay for the order they are asked if they have any coupons. If they do have coupons they are instructed to scan all of their coupons and hand them to the attendant. This is done whether there is a coupon detector present or not.

#### ***Method 4 (coupons are not accepted at U-Scan)***

No coupons are accepted at U-Scan whether or not there is a coupon detector present.

StoreNext Retail Technologies LLC endeavors to ensure that the information in this document is correct and fairly stated, but does not accept liability for any error or omission.

***Method 5 (the attendant processes the coupons)***

After the shoppers select to pay for the order they are asked if they have any coupons. If they do have coupons they are asked to hand all their coupons to the attendant. This is done whether or not there is a coupon detector present.

***Method 6 (pre-swiped payment card: scanned coupons are deposited in the slot only if a coupon detector is present)***

When shoppers pre-swipe of their payment cards they are asked if they have any coupons. They are then prompted to scan the coupons and insert them into the coupon slot one at a time if the coupon detector is present. If no coupon detector is present the shopper is instructed to scan the coupons and then give them all to the attendant.
