

Subject: New Genesis Ground Cable

Overview

In order to improve Serviceability and reduce the number of different parts that make up a Genesis U-Scan robot, a new Ground Cable is released. This new cable is used in 2 locations replacing 2 different cables previously installed.

Cables Being Replaced

Description	Where Used	Part #	Superseded By
Cable, Ground, 600mm	LCD Display and Chassis	11002090	11003565
Cable, Ground, 300mm	UPS and Chassis	11001993	11003565

New Cable

Description	Part #
Cable, Ground, 900mm	11003565

The introduction of this new Cable accomplished 2 things:

- Reduces the number of different parts that make up the Genesis U-Scan (more common parts).
- Improves Serviceability of the UPS within the Genesis. The cable is now long enough to allow the UPS to be pulled out the front of the Genesis without disconnecting or cutting this Ground Cable.

Impact

- Production
 - Cut in upon next purchase.
- Installed Units
 - Use only the new cable for any service replacement.
 - Any installed units that are found to have had the previous Ground Cable cut (was too short for easy service), should have this new cable installed. Fit-On-Fail or Next Visit only.
- Repair Center No Impact.
- Service Spares
 - Only the new cable should be ordered for any future spares purchases.
 - The Spares system should keep the old part numbers active as they are/may be used in other systems.
