

# Technical Bulletin

## Certification: NCR RealPOS XR7 Plus (Class 7703) Terminal

POS-TECH-17:04  
September 18, 2017

The RealPOS XR7 Plus terminal is considered Certified for use with ISS45 and ScanMaster, and will extend to ENCORA upon ENCORA's general release.

This certification is based upon its similarity with the previous XR7 (Class 7702), as well as the previous RealPOS XR8 (Class 7607) POS terminal certification, with which the XR7 shares the same chipset and CPU technology.

The certification excludes from scope the multi-touch capabilities of the X-Series and other cashier displays that can be configured with the XR7 Plus. These capabilities, and others as may be designated in the Pricing and Configuration bulletins, are out of scope for the certification of this product.

### BIOS ADVISORY

The BIOS currently shipped with the XR7 Plus is version 4.5.3.5, which is not compatible with ISS45.

NCR expects a subsequent BIOS release to support ISS45 (or ENCORA), but at this writing, the terminal must be reloaded with a the compatible BIOS version 4.5.3.2.
